Laparoscopic Appendectomy Post Op Nursing Interventions

After your surgery, it is normal to feel weak and tired for several days after you return. If you had laparoscopic surgery, you will probably be able to return to work or a call your doctor or nurse call line now or seek immediate medical care if:

Primary Postoperative Nursing Diagnosis

A laparoscopic appendectomy may be used in females of childbearing age, those in need of surgical intervention for appendicitis, gall stones, hiatus hernia, or other abdominal issues. The two procedures used to remove the appendix are open appendectomy, which involves making a larger incision to see the appendix, or laparoscopic appendectomy, a less invasive procedure that requires only two small incisions (5-7mm) in the abdomen. Laparoscopic appendectomy dramatically reduces postoperative hospital stay.

Symptoms:

- 5 Things You Need to Know About Post-Appendectomy Care
